LAB 09

SUBMISSION INSTRUCTIONS
Submit 1 python file using the naming convention below:
- classes.py

QUESTIONS
1. Retrieve **main.py** and **classes.py** from the zipped folder and copy them to your Python project folder.
2. Using the comments in **classes.py**, fill out the missing code for the various methods. Remember private instance variables begin with double underscores. You should use the constants provided in the class where necessary.
3. Test if the code in the **Television** class works as expected by running the **main.py** class. The output you get should correspond to that in the comments found in **main.py**. If you get different values, it means that you need to work on the logic of the methods in the **Television** class.
4. Once your program works as expected, submit the **classes.py** file.
